Kelvin Jenkins Generic Sewer Reticulation Designs

HIGHLY COMMENDED: DRAINAGE, SEWER, UTILITIES AND RIVERS

	8 <u></u>	
Name:	Kelvin Jenkins	Category:
Position:	Civil Engineer	Design & Visualisation Survey & Construction
Company:	Wood & Grieve Engineers	
Name Project:	Generic Sewer Reticulation Designs	12d Synergy
Client:		

12d International Innovation Awards

Description of Project:

- Developed to automate the design and documentation of Sewer Reticulation to Local authority standards
- The customisation was developed for Queensland Projects, but is adaptable and flexible enough for any region and standard.

Description of problem faced / task undertaken:

- We have found certain aspects of sewer reticulation design and documentation within 12d quite difficult using the native framework of 12d.
- 12d has limited scope to set various elements of reticulation sewer design, such as lid types, bulkheads, house connection type, embedment types and structure drop types.

How the problem was solved:

 We have developed a sewer design tool for 12d which designs sewers based on local authority standards.

The tool will automatically design and/or set:

- Structure Drop Types
- Structure Lid Types
- Bulkhead Types and Spacings
- House Connection Types
- Embedment Types
- The design tool can be modified by users to suit different local authority standards and includes a library

or different local authority standards.

- The Design Tool will also give errors and commentary to the user about the sewer design based on standards and allows for the design to be tweaked accordingly. For example if a pipe enters too high within the bulb of a poo pit, the tool will highlight the issue and suggest a solution.
- Using this design tool with 12d, sewer designs can be plotted to a local authority standard longsection with no additional drafting or calculations required.

Relevant 12d screenshots and/or data attached:

- Structure Details Design Tool Screenshot
- House Connection Design Tool Screenshot
- Final Sewer Longsection Plot PDF
